

PYTHON LAB ASSIGNMENT

Lecture 8: Dictionary (20 Questions)

(With Demo Input & Output)

Q1. Create a dictionary of 5 students with their marks. Print all keys and all values separately.

Demo Input:

(No input – predefined dictionary)

Demo Output:

Keys: ['Aman', 'Riya', 'Kabin', 'Neha', 'Arjun']

Values: [78, 85, 69, 90, 74]

Q2. Check whether a given key exists in a dictionary.

Demo Input:

Enter name: Riya

Demo Output:

Key found. Value = 85

Q3. Merge two dictionaries.

Demo Input:

d1 = {1: 'A', 2: 'B'}

d2 = {3: 'C', 4: 'D'}

Demo Output:

Merged Dictionary: {1: 'A', 2: 'B', 3: 'C', 4: 'D'}

Q4. Update price of a fruit in dictionary.

Demo Input:

Enter fruit: Apple

Enter new price: 120

Demo Output:

Updated Dictionary: {'Apple':120, 'Banana':40, 'Mango':60}

Q5. Delete a given key from dictionary.

Demo Input:

Enter key to delete: Mango

Demo Output:

Updated Dictionary: {'Apple':120, 'Banana':40}

Q6. Count number of keys in dictionary.

Demo Input:

(No input)

Demo Output:

Total keys = 3

Q7. Print dictionary in ID -> Name format.

Demo Input:

(No input)

Demo Output:

101 -> Amit

102 -> Neha

103 -> Rahul

Q8. Find subject with highest marks.

Demo Input:

(No input)

Demo Output:

Highest Marks Subject: Maths = 95

Q9. Create dictionary from two lists.

Demo Input:

keys = [1,2,3]

values = ['A', 'B', 'C']

Demo Output:

{1:'A', 2:'B', 3:'C'}

Q10. Copy one dictionary into another.

Demo Input:

(No input)

Demo Output:

Original: {1:10, 2:20}

Copied: {1:10, 2:20}

Q11. Check whether a value exists in dictionary.

Demo Input:

Enter value: 90

Demo Output:

Value exists

Q12. Remove last inserted key-value pair.

Demo Input:

(No input)

Demo Output:

Updated Dictionary after removing last item: {1:10, 2:20}

Q13. Increase quantity of an item by 5.

Demo Input:

Enter item: Pen

Demo Output:

Updated Dictionary: {'Pen':15, 'Pencil':20}

Q14. Print all key-value pairs using loop.

Demo Input:

(No input)

Demo Output:

Pen : 15

Pencil : 20

Q15. Clear all contents of dictionary.

Demo Input:

(No input)

Demo Output:

Dictionary after clear: {}

Q16. Create dictionary of numbers and squares (1–5).

Demo Input:

(No input)

Demo Output:

{1:1, 2:4, 3:9, 4:16, 5:25}

Q17. Find age of a given name.

Demo Input:

Enter name: Neha

Demo Output:

Age = 21

Q18. Create dictionary from user input (3 pairs).

Demo Input:

Enter key: A

Enter value: 10

Enter key: B

Enter value: 20

Enter key: C

Enter value: 30

Demo Output:

{'A':10, 'B':20, 'C':30}

Q19. Print all capitals from country-capital dictionary.

Demo Input:

(No input)

Demo Output:

Delhi
Tokyo
Paris

Q20. Count values greater than 50.

Demo Input:

(No input)

Demo Output:

Count = 2

Lecture 9: File Handling (Till Slide 21 Only) – 10 Questions

(open, read, readline, readlines, write, writelines, close)

Q21. Write 3 lines into `info.txt` .

Demo Input:

(No input)

Demo Output:

File created and data written successfully.

Q22. Read full content using `read()` .

Demo Input:

(No input)

Demo Output:

Welcome to Python
File Handling Lab
Practice makes perfect

Q23. Read first 10 characters.

Demo Input:

(No input)

Demo Output:

Welcome to

Q24. Read first line using `readline()` .**Demo Input:**

(No input)

Demo Output:

Welcome to Python

Q25. Read file line by line using `readlines()` .**Demo Input:**

(No input)

Demo Output:

Welcome to Python
File Handling Lab
Practice makes perfect

Q26. Append a new line.**Demo Input:**

(No input)

Demo Output:

Data appended successfully.

Q27. Count number of lines in file.**Demo Input:**

(No input)

Demo Output:

Total Lines = 4

Q28. Write list of strings using `writelines()` .**Demo Input:**

(No input)

Demo Output:

Data written to file.

Q29. Read `lines.txt` and print without blank lines.**Demo Input:**

(No input)

Demo Output:

Python

File Handling

Lab

Q30. Write 5 student names & read them.**Demo Input:**

(No input)

Demo Output:

Amit

Riya

Kabir

Neha

Arjun
